Amendments to the Claims:

1. (Currently Amended) A non-transitory computer readable storage medium having computer-readable program instructions embodied in the medium, the computer-readable program instructions being configured to, when executed, direct an apparatus to: ~~be executed by a processing device to provide access to media files on a digital device, the computer-readable program instructions comprising~~:

~~first instructions for generating~~ generate a media view that provides access to at least ~~one~~ two digital media files via at least two respective media file representations;~~and associates the at least one digital media file with a period of time; and~~

cause the two media file representations to be included within a column associated with a given period of time, wherein the column is one a of plurality of columns;

permit scrolling through periods of time and the associated plurality of columns; and

cause at least one of the ~~second instructions for generating~~ media file representations to be enlarged when the scrolling moves the at least one media file representation into a position that is ~~within the media view such that the media file representations associated with a period of time are enlarged media file representations when the period of time is~~ proximate a predefined position within the media view, wherein the at least one of the media file representations is enlarged relative to a size of the at least one of the media file representations when the at least one of the media file representations is at a position that is not proximate the predefined position.

2. (Currently Amended) The computer readable storage medium of claim 1, wherein the instructions are further configured to direct the apparatus to ~~second instructions are further defined as generating~~ generate the media file representations within the media view such that the media file representations associated with a period of time proximate a vertical centerline of the media view are enlarged media file representations.

3. (Currently Amended) The computer readable storage medium of claim 1, wherein the ~~second~~ instructions are further ~~defined~~configured to direct the apparatus to generate the ~~as generating~~ media file representations within the media view such that media file

representations gradually decrease in size ~~the further that~~as an associated period of time deviates from the predefined position.

4. (Currently Amended) The computer readable storage medium of claim 1, further comprising ~~third~~ instructions configured to direct the apparatus to cause ~~for displaying~~ a selected media file representation from the media view to be displayed in a ~~"~~"pop-up" view format.

5. (Currently Amended) The computer readable storage medium of claim 4, wherein the ~~third~~ instructions are further ~~defined as displaying~~configured to direct the apparatus to cause the ~~a~~ selected media file representation from the media view to be displayed in the "pop-up" view format, wherein the "pop-up" view format exceeds the size of all other media file representations within the media view.

6. (Currently Amended) The computer readable storage medium of claim 4, wherein the ~~third~~ instructions are further configured to direct the apparatus to cause the~~defined as displaying a~~ selected media file representation from the media view to be displayed in the "pop-up" view format, wherein the selected media file representation is chosen from the media file representations associated with the period of time proximate to the predefined position.

7. (Currently Amended) The computer readable storage medium of claim 1, wherein the ~~second~~ instructions are further configured to direct the apparatus to ~~provide for generating~~ generate the media file representations within the media view such that ~~the~~ a media file representation associated with a period of time proximate a predefined position of the media view and proximate the center point of the predefined position is an enlarged media file representations in comparison to other media file representations in the time period proximate the predefined position.

8. (Currently Amended) The computer readable storage medium of claim 2, wherein the ~~second~~ instructions are further configured to direct the apparatus to generate the ~~provide for generating~~ media file representations within the media view such that ~~the~~ a media file

representation associated with a time period proximate to the vertical centerline and proximate to a center point within the time period is an enlarged media file representation in comparison to other media file representations in the time period proximate the predefined position.

9. (Currently Amended) The computer readable storage medium of claim 7, wherein the ~~second~~ instructions are further configured to direct the apparatus to generate the ~~provide for generating~~ media file representations within the media view such that the media file representations associated with a time period proximate to the vertical centerline decrease in size the further that a media file representation deviates from the center point.

10. – 34. (Cancelled)

35. (Currently Amended) An apparatus comprising at least one processor and at least one memory including computer program code, the at least one memory and the computer program code configured to, with the at least one processor, direct the apparatus at least to:~~A digital device, the device comprising:~~

~~a processing unit that executes computer-readable program instructions for accessing media files, the computer-readable program instructions comprising:~~

~~first instructions for generating~~ generate a media view that provides access to at least ~~one~~two digital media files via at least two respective media file representations;~~and associates the at least one digital media file with a period of time, and~~

cause the two media file representations to be included within a column associated with a given period of time, wherein the column is one of a plurality of columns;

permit scrolling through periods of time and the associated plurality of columns; and

cause at least one of the ~~second instructions for generating~~ media file representations ~~within the media view such that the media file representations associated with a period of time are enlarged media file representations when the period of time is~~ to be enlarged when the scrolling moves the at least one media file representation into a position that is proximate a predefined position within the media view, wherein the at least one of the media file representations is enlarged relative to a size of the at least one of the media file representations

when the at least one of the media file representations is at a position that is not proximate the predefined position; and

~~a display in communication with the processing unit that presents the media view.~~

36. (Currently Amended) The ~~digital device~~apparatus of claim 35, wherein the apparatus is further directed to generate the ~~second instructions are further defined as generating~~ media file representations within the media view such that the media file representations associated with a period of time proximate a vertical centerline of the media view are enlarged media file representations.

37. (Currently Amended) The apparatus~~digital device~~ of claim 35, wherein the apparatus is further directed to generate the ~~second instructions are further defined as generating~~ media file representations within the media view such that media file representations gradually decrease in size the further that an associated period of time deviates from the predefined position.

38. (Currently Amended) The apparatus~~digital device~~ of claim 35, wherein the apparatus is further ~~comprising third instructions for displaying~~directed to cause a selected media file representation from the media view to be displayed in a "pop-up" view format.

39. (Currently Amended) The apparatus~~digital device~~ of claim 35, wherein the apparatus is further directed to generate the ~~second instructions further provide for generating~~ media file representations within the media view such that a~~the~~ media file representation associated with a time period proximate to the predefined position and proximate a predefined point within the time period is an enlarged media file representation in comparison to other media file representations within the time period proximate the predefined position.

40. – 47. (Cancelled)

48. (Currently Amended) The apparatus~~digital device~~ of claim 35, wherein the enlarged media file representations are enlarged relative to media file representations associated with other periods of time.

49. (Previously Presented) The computer readable storage medium of claim 1, wherein the enlarged media file representations are enlarged relative to media file representations associated with other periods of time.

50. (New) A method comprising:

generating a media view that provides access to at least two digital media files via at least two respective media file representations;

causing the two media file representations to be included within a column associated with a given period of time, wherein the column is one of a plurality of columns;

permitting scrolling through periods of time and the associated plurality of columns; and

causing, by a processor, at least one of the media file representations to be enlarged when the scrolling moves the at least one media file representation into a position that is proximate a predefined position within the media view, wherein the at least one of the media file representations is enlarged relative to a size of the at least one of the media file representations when the at least one of the media file representations is at a position that is not proximate the predefined position.

51. (New) The method of claim 1, wherein permitting scrolling includes permitting horizontal scrolling across columns and vertical scrolling within columns.

52. (New) The computer readable storage medium of claim 1, wherein the instructions configured to direct the apparatus to permit scrolling include being configured to permit horizontal scrolling across columns and vertical scrolling within columns.

53. (New) The apparatus of claim 35, wherein the apparatus being directed to permit scrolling includes being directed to permit horizontal scrolling across columns and vertical scrolling within columns.
